Toothfish are caught in the southern oceans, both inside and outside the area managed by the Commission for the Conservation of Antarctic Marine Resources (CCAMLR).

Total Allowable Catches (TACs) for toothfish fisheries inside the Convention Area are set by CCAMLR according to a comprehensive stock assessment process developed by scientists from CCAMLR member nations.

TACs for toothfish fisheries outside the CCAMLR Convention Area are set by the coastal State or RFMO with jurisdiction over those waters.
